

GSEB CLASS 10 SOCIAL SCIENCE

Chapter 11: India: Water Resources - Section B

SECTION B

Q1. Explain the concept of water resources.

- **Meaning:** Water is a **natural and essential resource** directly associated with the life of all living organisms.
- **Sources:** The three main sources of water are **rainwater, surface water and groundwater**.
- **Uses:** Water is used for **drinking, domestic purposes, irrigation and industries**.
- **Importance:** Since water is a **limited resource**, it must be used carefully and conserved.

Q2. State the uses of groundwater.

- **Irrigation:** Groundwater is used **mainly for irrigation** in agriculture.
- **Drinking:** It is an important source of **drinking water**.
- **Domestic Use:** It is used for various **household purposes**.
- **Industries:** Groundwater is also used for **industrial purposes**.

Q3. What is the importance of 'Rain' in water?

- **Primary Source:** Rain is the **original and primary source of water** on the earth.
- **Water Sources:** Rivers, lakes, streams, wells and other water sources are largely dependent on **rainfall**.
- **Groundwater Recharge:** Rainwater **recharges groundwater** by percolating into the soil.
- **Agriculture:** Rain is very important for **irrigation and agricultural activities**, especially in areas dependent on monsoon rainfall.

Q4. "Agriculture in South India is done through ponds." Why?

- **Terrain:** Much of South India has **plateaus and hard rocky surfaces**.
- **Groundwater:** In such areas, **groundwater availability is comparatively less** and digging wells can be difficult.
- **Rainwater Storage:** Rainwater can be **collected and stored in ponds** for later use.
- **Irrigation:** Therefore, **ponds are an important means of irrigation** in many parts of South India.
